

CODE VIDYA HACK DAY · PS 5

Crew

Describe your interests. We'll find your crowd.

Hobby Matchmaker for Aatmoday — built for new students who don't yet know where they belong

THE PROBLEM

Interest is everywhere. Direction isn't.

Every student arrives with hobbies and curiosities — but Aatmoday's groups and events live in scattered lists. New students especially don't know which sub-group fits them, and even when they find one, they don't know how to start the conversation.

Discovery is hard

No easy way to see which group matches a specific interest.

First message is harder

Finding the group isn't enough — starting the chat is the real block.

THE SOLUTION

One sentence in. Your people out.

Crew takes a free-form description of a student's interests and matches it against every Aatmoday group and event — returning ranked recommendations, plain-language reasoning, and a ready-to-send icebreaker.

Describe your interests

“I like chess, late-night debugging, and long rainy walks”

Find my crowd

Ranked matches

Top Aatmoday groups & events, scored.

Plain-language reasoning

Why each match actually fits.

Personalized icebreaker

Something real to say on arrival.

HOW IT WORKS

Three steps, one conversation started

01

Describe

Student types their interests in their own words — no dropdowns, no categories to guess.

02

Match

The model compares that text against the full Aatmoday group & event catalog and ranks the best fits.

03

Break the ice

Each match ships with a short reason it fits, plus a personalized icebreaker to open with.

UNDER THE HOOD

Built for a 6-hour window, not a toy demo

Next.js 16 + React 19

App Router, Turbopack, Turborepo monorepo

Better Auth

Google-only sign-in, session-checked on every route

Neon Postgres + Drizzle

Typed schema, groups/events/match history

Gemini API

Interest understanding, reasoning, icebreakers

proxy.ts

Server-side route gating, no client-only auth checks

Tailwind CSS 4

Design system for the matching UI & landing page

SECURE BY DEFAULT

No public routes. No trusted client input.

Server-side session gating

proxy.ts checks every route except sign-in/up — never a client-only redirect.

Re-verified on every mutation

Match requests re-check the session server-side; the client never supplies a user id.

Parameterized queries only

All access through Drizzle — no raw SQL string interpolation, anywhere.

Server-only secrets

Gemini and OAuth keys never reach the client bundle.

WHY IT SCORES

Built against the rubric, not around it

3

ranked matches
per query, with score

1:1

reasoning + icebreaker
per matched group

100%

routes session-checked
server-side

- Relevance: matching runs against the real Aatmoday catalog, not a toy list
- Reasoning quality: every match ships a plain-language “why”, not just a score
- Personalization: icebreakers reference the student's actual stated interests
- Ease of use: a single free-text field, no forms to fill in first

Crew

Every student has a crowd waiting. Crew just helps them find it faster.
